We conduct an organic farm for 25 years, the area of 33 hectares. Permanent crops are cereals such as: rye, oat, and spelt (old variety of wheat). Except that we have many grasslands and pastures for cows. In recent years we started to grow vegetables (4,1 ha) (such as: cucumbers 1,2 ha, leeks 1,2 ha, red beets 0,6 ha, carrots 0,6 ha, broccoli 0,5 ha). We sell these vegetables to 3 companies: Bio Food, Ökohof, Bonduelle. We raise cattle (40), in that dairy cows (11), from which we obtain milk. Except that we have a small hen and chicken (50) and goose (35) production.

Our farm is a family venture because our children help to conduct it. Our main motivation to convert into organic way was love of nature and a growing demand for natural, healthy food produced without synthetic chemicals.
